December 2010

Land Rover Defender Ute Carrier

Specifically engineered to suit the drop down tail gate.

Fitting directly to the rear end of the Defender Dual Cab Ute is this new spare wheel carrying system - a must have accessory for every Defender owner .

Designed to swing away from the drop down tail gate and allow unobstructed access to the tray area and additional storage space in the subfloor wheel well. The spare wheel carrier delivers strong and convenient external mounting and easy access to the spare.

The carrier mount and lock fit neatly to the Defender's rear panel and are finished with a powder coating in a functional satin black to match.

Both mounts and carrier are constructed under strict manufacturing quality guidelines with all components laser cut for the highest accuracy and optimum join strength. Each welded joint is conducted using a robotic welding station ensuring perfect welds with uniform strength and finish across all welds. Once complete the components bar receive a liberal zinc coating, sealing the steel from salt and moisture, so protecting it from corrosion and rust for many years.

Features inherent in the entire Kaymar range include rubber coated carrier locking handles, strong axle pivots with vehicle grade roller bearings and hold open lock.

Rear Spare Wheel Carrier

K1710 RRP \$1048.00 (plus fitting \$180.00)
