

# DISCOVERY 3 REAR BUMPER

## DISCOVERY 3

Kaymar's Discovery 3 bumper is a steel replacement for the original plastic bumper.

A towbar is not incorporated into Kaymar's bumper as the towbar is built as part of Landrovers chassis.

Original trailer plug and recovery point remain easily accessible.

Kaymar's bar offers a full steel protection bumper following very closely to the lines of the original bar. As well as adding greater strength to the rear end this bar can also accommodate twin spare wheels or a single wheel carrier on one side and a single jerry can holder on the other.

Optional attachments such as a hilift jack holder, H/F aerial mount and telescopic light are also available.

Kaymar has incorporated fully ADR approved LED lights to comply with ADR lighting requirements. These lights are slim line and maintenance free.

Original equipment reversing sensors can be re-fitted into Kaymars bar.

As with all Kaymar carriers, the carriers are easily removed in about five minutes.
