Mitsubishi Challenger 2010 PB (No Sensors) – Replacement Rear-Step Bar/Towbar

Maximising the capacity of the midsize Challenger was the objective.

Challenger with base Rear Step Bar/Towbar fitted

New to market comes the Kaymar solution to adding external carrying capacity for fuel and spare tyres as well as adding rear end protection while improving off-road clearance. A full capability towbar is included.

Designed to be built into a complete system from the initial bar it can be fitted with two carrier arms and accessory brackets making it capable of carrying a combination of spare wheels, jerrycans, work light, HF antenna and HiLift jack.

Manufactured tough with laser cut steel that is robotically welded to ensure a perfect fit and superb welds these bars are made to last the life span of the vehicle through all its operating conditions.

The finish is great too. Under the powder coated surface the bars are zinc coated to seal and protect. The powder coat is satin black and the step is aluminium chequerplate.

Behind the scenes are integral LED signal lights which include reversing, indicator, brake and tail lights. The LED modules have a long life expectancy due to their resistance to vibration damage, water/weather and dust proofing.

Kaymar Announces...

When fitted the carrier arms are mounted on heavy duty pivots with vehicle grade bearings, gas strut assisted opening/holdback and over centre locking to stop vibration. Locking handles are rubber coated for non-slip and comfort.

Standard fittings include LED signal lights, **3000Kg** rated towbar (**300Kg** ball weight) and two carrier arm pivots.

There's also a suite of accessories to make travelling more enjoyable and your vehicle look great including telescopic work light, HF aerial mount, hi lift jack carrier and jerry can carriers.

Challenger with Jerrycan Carrier, Spare Tyre Carrier & HF aerial bracket
